Here are the block-level HTML

elements in HTML:

address > article > aside

blockquote > canvas > dd

div > dd > dt

fieldset > form > h1-h6

footer > forms > h1-h6

header > hr > li

main > nav > noscript > col

table > p > pre > section

<tbl> <thead> <tbody>

<tr> <td> <th>

<caption>

Every HTML element has a

05 SUNDAY

default display value,

depending on what type of element

it is.

There are 2 display values

* Block

* Inline

HTML • Javascript:

• we can make more dynamic pages

- 10 Javascript makes HTML pages
- "more dynamic and interactive.

```
<button type="button">
```

```
onclick = "document.getElementById('demo').parentHTML = Date()";
```

```
</button>
```

```
<p id="demo"></p>
```

HTML - Head element

The HTML `<head>` element

- 1 is a container for the following elements:
- 2 `<title>`, `<style>`, `<meta>`,
- 3 `<link>`, `<script>` and `<base>`

HTML metadata

the HTML document.

- 11 `<meta>` element is not displayed

→ `<meta>` element is typically used to specify the character set,

page description, keywords, author of the document and Viewport settings

- 6 → The metadata will not be displayed on the page, but is used by browser (how to display content or reload page) by search engines initially.

* HTML : Responsive web design!

Responsive web design is about
Creating web pages that look good
on all devices!

* A responsive web design will
automatically adjust for
different screen sizes and
viewports.

HTML - Semantic Elements

Semantic elements = elements with a meaning
